

Crystal Clear Cubed Ice

A Step-By-Step Guide

Supplies Needed:

Coleman FlipLid Personal 5 Quart Cooler - Amazon \$12.35 - <https://amzn.to/39iyh8H>
Orblue Serrated Bread Knife - Amazon \$13.97 - <https://amzn.to/3i00vJP>
SE 20 oz. Rock Pick Hammer - Amazon \$18.99 - <https://amzn.to/3a022Ko>

- 1 Fill the *Flip Lid* Personal cooler <https://amzn.to/39iyh8H> 2/3 of the way with water. Tap water will work just as well as bottled or purified water. ***Do not overfill**
- 2 Remove the cooler lid and set it aside. ***Do not freeze with the lid on or it won't work**
- 3 ***Important** Put entire cooler, without the lid, in the freezer and freeze for 24 hours.
- 4 Remove the cooler from the freezer and turn it upside down on a sheet pan to catch the excess water. Leave upside down until you hear the ice drop, should be less than a minute or two.
- 5 Set the cooler aside and grab a hammer <https://amzn.to/3a022Ko> and a large serrated knife. <https://amzn.to/3i00vJP> A long bread knife works perfectly.
- 6 Break open the part of the ice that is filled with water and let it drain. Knock off all the excess partially frozen ice.
- 7 Cut a 1/4" deep groove approximately 2" from the edge and then tap the knife with the hammer and it should make a clean break along the groove. (It's a good idea to measure your whiskey glass to make sure 2" cubes will fit in the glass) You can also use the pick on the end of your hammer to make organic shaped ice instead.
- 8 Continue step seven until you have all the ice cut into approximately 2" x 2" x 2" cubes.
- 9 Drop a cube in your glass, pour your favorite Scotch, Whiskey or other beverage of choice over the crystal clear ice, snap a photo, send it to your friends and enjoy.
